

Q. How was the referendum plan developed?

A. Reasoning

In 2014, the Weyauwega-Fremont School District Board of Education began a planning process to identify our facility and educational needs at all of our schools. In the summer of 2014 Architects and Engineers analyzed the facility conditions and the educational needs. Engineers reviewed the mechanical / electrical / technology systems. Architects analyzed materials, how the curriculum fits the buildings and gathered input from community, staff and students regarding the educational conditions of the schools. A report was prepared summarizing the needs, costs and options to consider for improvements. In the fall of 2014, a community based committee reviewed the report of the facilities and educational condition of the schools. The committee prioritized the improvements they felt were MOST needed to improve our schools. They understood that all needs cannot be met financially and collaboratively summarized the needs. In 2015 and 2016 the school board obtained more input which further refined the recommendation to focus on areas of improvement to address heating/cooling/air quality, safe secure entrances and improvements to the high school with remodeling and select additions.
